I am a full stack web developer who is passionate about providing great user experiences.

Senior Software Engineer

Apex Capital (2008 to present)

Worked as a full stack developer maintaining a set of Linux applications backed by an Oracle database. Backend programming was done in Java. Created rich frontend experiences with HTML5, JavaScript, and CSS.

Helped introduce new technologies to our frontend build process. Some of these included using LESS as a CSS preprocessor, Gulp as a build tool, and AngularJS as a Javascript framework.

Created and led the design of the Apex web site (apexcapitalcorp.com) to be fully responsive for a range of devices and have an enhanced user experience.

Developed a brand new load board for truckers (nextload.com) with a mobile-first approach and a friendly design.

Led a team to design a fuel card management platform that was based on Material Design and used a modular Angular js app structure. This project also helped us introduce NodeJS as a middle layer to transform requests and handle other smaller utilities.

Application Developer

2020 Communications (Jan 2008 - Oct 2008)

Assisted Senior developers in designing and launching an order entry application which facilitated orders for clients such as AT&T, Verizon, and Qwest.

Migrated legacy applications written in classic ASP to ASP.NET 2.0.

Education

BS: Computer Science (2008)
BM: Music Performance (2008)

University of North Texas
Denton, TX

Skillset

User Experience Design
Responsive Interfaces

HTML5
JavaScript (ES5, ES6)
CSS (LESS, SASS)
Gulp
AngularJS

Java
NodeJS

Conferences Attended

An Event Apart
ConvergeSE
FluentConf
NodeSummit

Tools I use

WebStorm
Atom
Sketch
OSX/Linux
Git
